A Crown & Bridge Remover That Works

An easy and effective way to remove crowns, bridges, or onlays without perforation in a way that's less traumatic for the patient

Ideally you won't need to use a crown and bridge remover often, because that means there is some type of damage to the crown or that the fit is not secure. In this case, removing and recementing the crown is the only way to ensure it stays put.

Dr. Ellen Lippa, who practices in Buffalo, NY, uses Richwil Crown and Bridge Remover whenever she finds herself in this scenario. "I have found Richwil Crown and Bridge Remover is most effective for patients whose crowns have a little bit of mobility," she said. "If there's no opposing crown or other dental work, then you can use it quite effectively."

Saving Time and Money

Richwil Crown and Bridge Remover does not require perforation of the crown, so you can recement without needing to mill a new crown or wait for one to come back from the lab. "If you had to put a hole in the top of the crown to get it off, then you wouldn't be able to recement the original crown," said Dr. Lippa.

In addition to time and cost savings, she appreciates its simplicity. "With other crown removers, the

Ellen Lippa, DDS

"Richwil Crown and Bridge Remover is not nearly as invasive to the patient as more traditional methods of removing crowns and bridges."

3 REASONS TO TRY RICHWIL CROWN AND BRIDGE REMOVER

- 1** Safe, non-traumatic removal of crowns, bridges, and inlays
- 2** Does not require perforation of crown and allows for recementation
- 3** Made of food-grade, water-soluble resin that adheres to teeth, gold, porcelain, and acrylic

process is more traumatic for the patient," Dr. Lippa said. "Richwil Crown and Bridge Remover is not nearly as invasive to the patient as more traditional methods of removing crowns and bridges."

The material is also made of a food-grade, water-soluble resin, which makes it a safe option for patients. "You don't have to worry that you're putting something chemically inappropriate in a patient's mouth," noted Dr. Lippa. "When you use it in the right situation, it's effective. I have recommended it to other doctors because it works."
